

## Lab 6 – Improve dashboard and profile

### Aim

Try to use knowledge and skills you have learned in previous lab to improve dashboard and profile individually.

### Resources

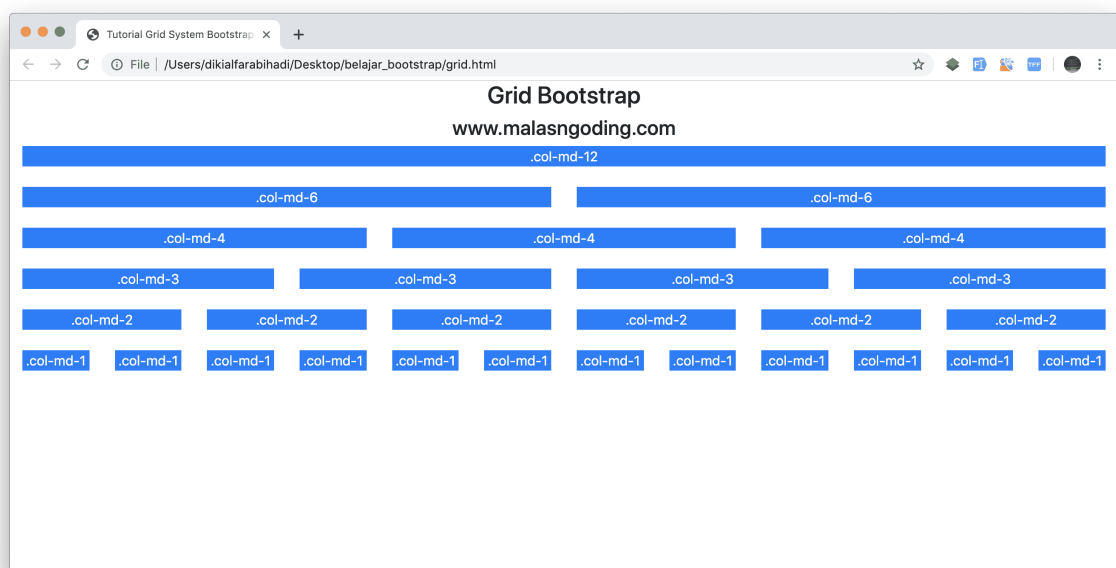

1. You should continuously use the all settings of last lab.

### Tips:

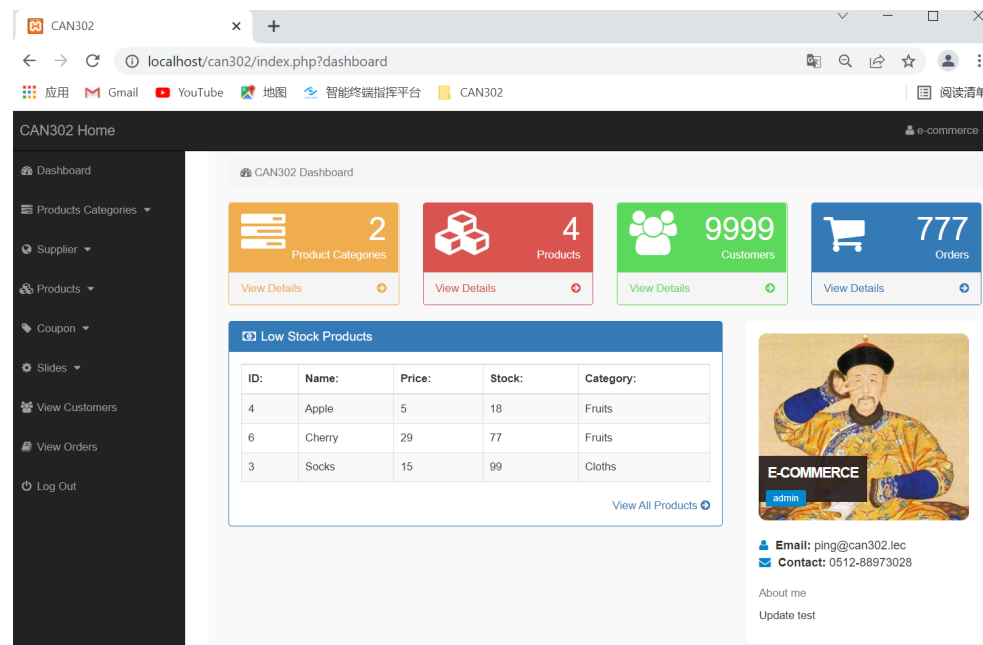

1. If you are not sure why you are doing something, ask a TA. This is what they are here for.
2. Our labs have different focus than the M-Dev-Store online videos. While if you want to be an expert, you are recommended take both labs and on-line videos.
3. The forums are available for questions and discussions.
4. These labs are expected take more than the 2 allocated hours. You should complete them in your own time before the next lab. Practice makes perfect!

### A sample dashboard page:

Bootstrap includes a responsive, mobile first fluid grid system that appropriately scales up to 12 columns as the device or viewport size increases. The following demo shows an example for the div for different sizes.

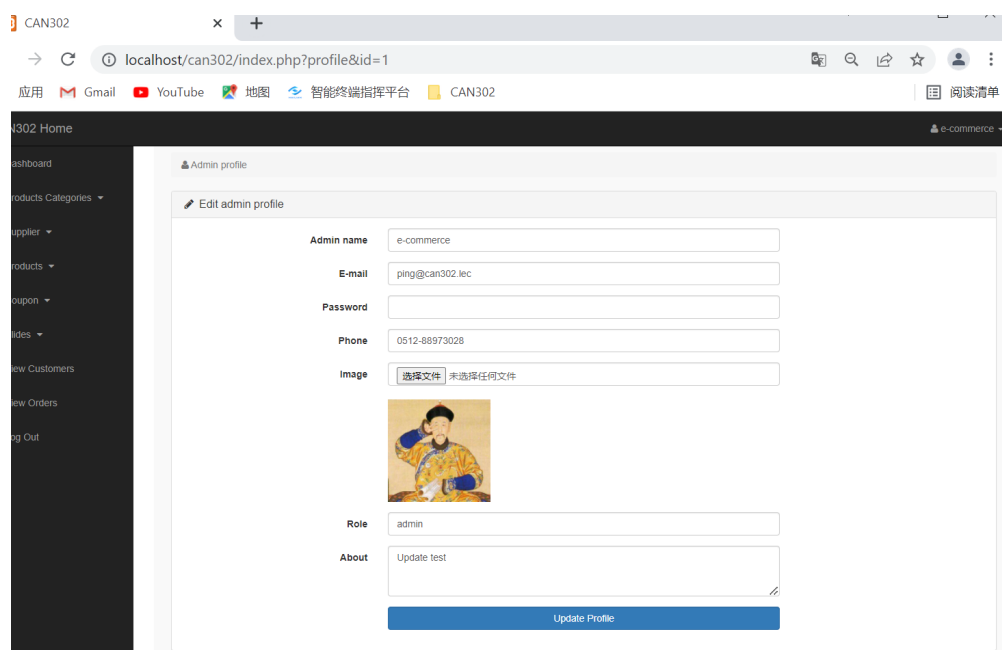

Try to use this system to improve the dashboard as:

In this example, we showed several statistics in one row. In the left of bottom, we showed the products that stock is less than 100, and we showed the basic information of current admin user in the right.

A sample profile page:

In this example, we can edit the profile of current admin user.

If you are not sure how to do, please make sure you understand previous labs clearly.

BTW, some useful css styles can be found in previous lab codes. Please remove the comments marks to make it effective.
