Department of Communications and Networking

Xi'an Jiaotong-Liverpool University (XJTLU)

Week 3 – Welcome newbie
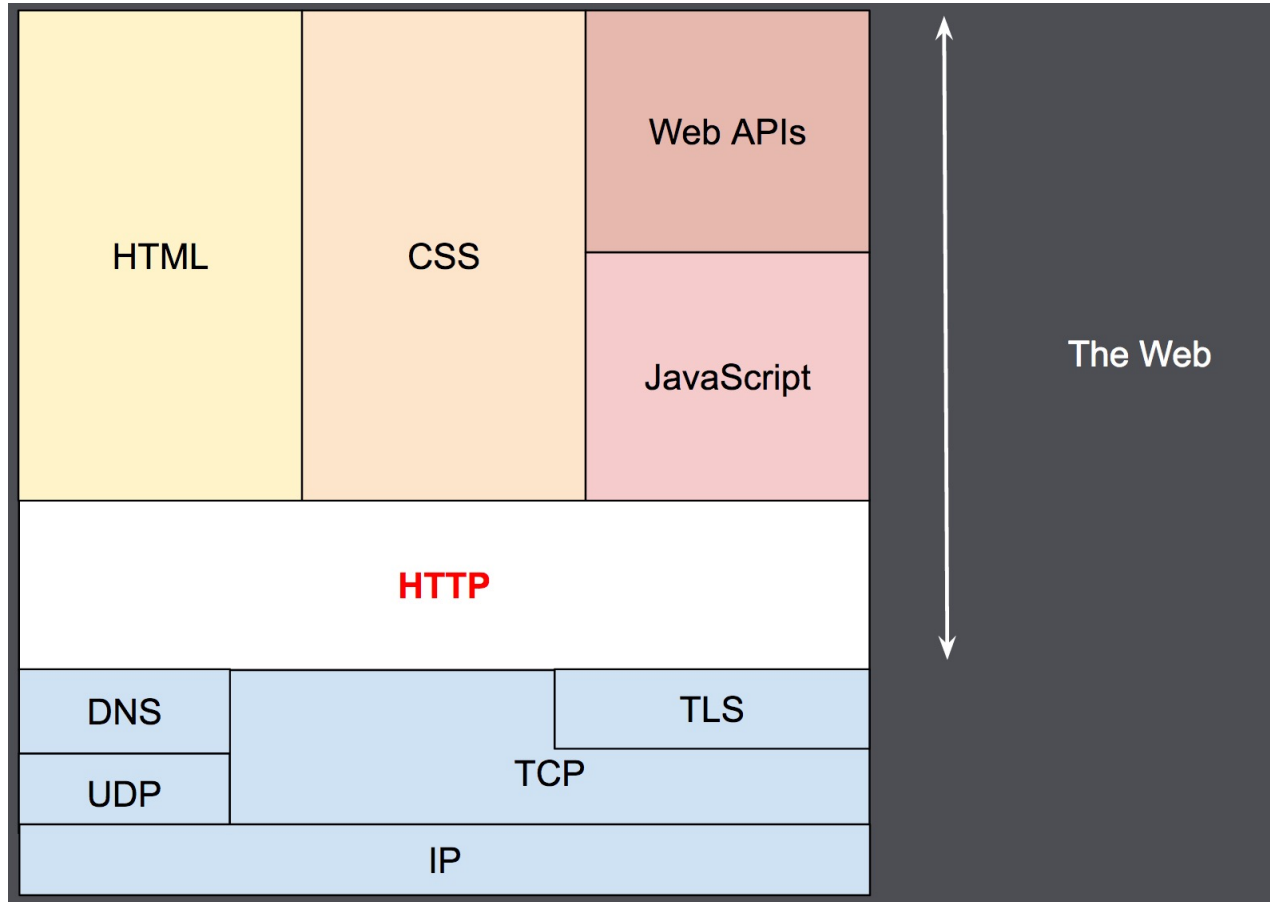

# HTTP - protocol between browser and server

request

response

Http protocol

HTTP is a protocol for fetching resources such as HTML documents. It is the foundation of any data exchange on the Web and it is a client-server protocol, which means requests are initiated by the recipient, usually the Web browser. A complete document is reconstructed from the different sub-documents fetched, for instance, text, layout description, images, videos, scripts, and more.

https://developer.mozilla.org/en-US/docs/Web/HTTP/OverView
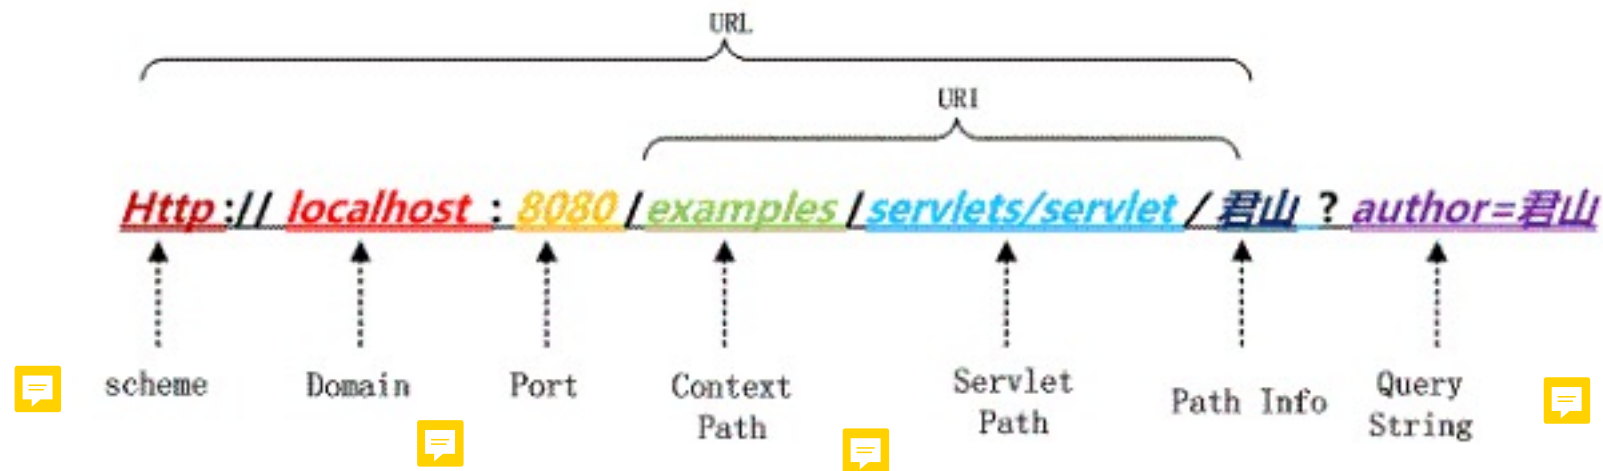

Http protocol - request

Http protocol - response

```
 1  行   HTTP/1.1  200  OK
 2  头   Content-Type: text/html;charset=utf-8
 3       Content-length: 2048
 4       Content-encoding: gzip
 5  空行
 6  体   <html>
 7           <head>
 8           </head>
 9           <body>
10               <h1>尚硅谷</h1>
11           </body>
12       </html>
```

https://zhuanlan.zhihu.com/p/63855809

Brower – draw the page

```
1   行    HTTP/1.1  200  OK
2   头        Content-Type: text/html;charset=utf-8
3            Content-length: 2048
4            Content-encoding: gzip
5   空行
6   体    <html>
7            <head>
8            </head>
9            <body>
10               <h1>尚硅谷</h1>
11           </body>
12       </html>
```

协议版本	空格	状态码	空格	状态码描述	回车符	换行符	状态行
头部字段名	:	值		回车符	换行符		响应头部
...							
头部字段名	:	值		回车符	换行符		
回车符	换行符						
							响应正文

https://zhuanlan.zhihu.com/p/63855809

Http response code

HTTP response status codes indicate whether a specific **HTTP** request has been successfully completed. Responses are grouped in five classes:
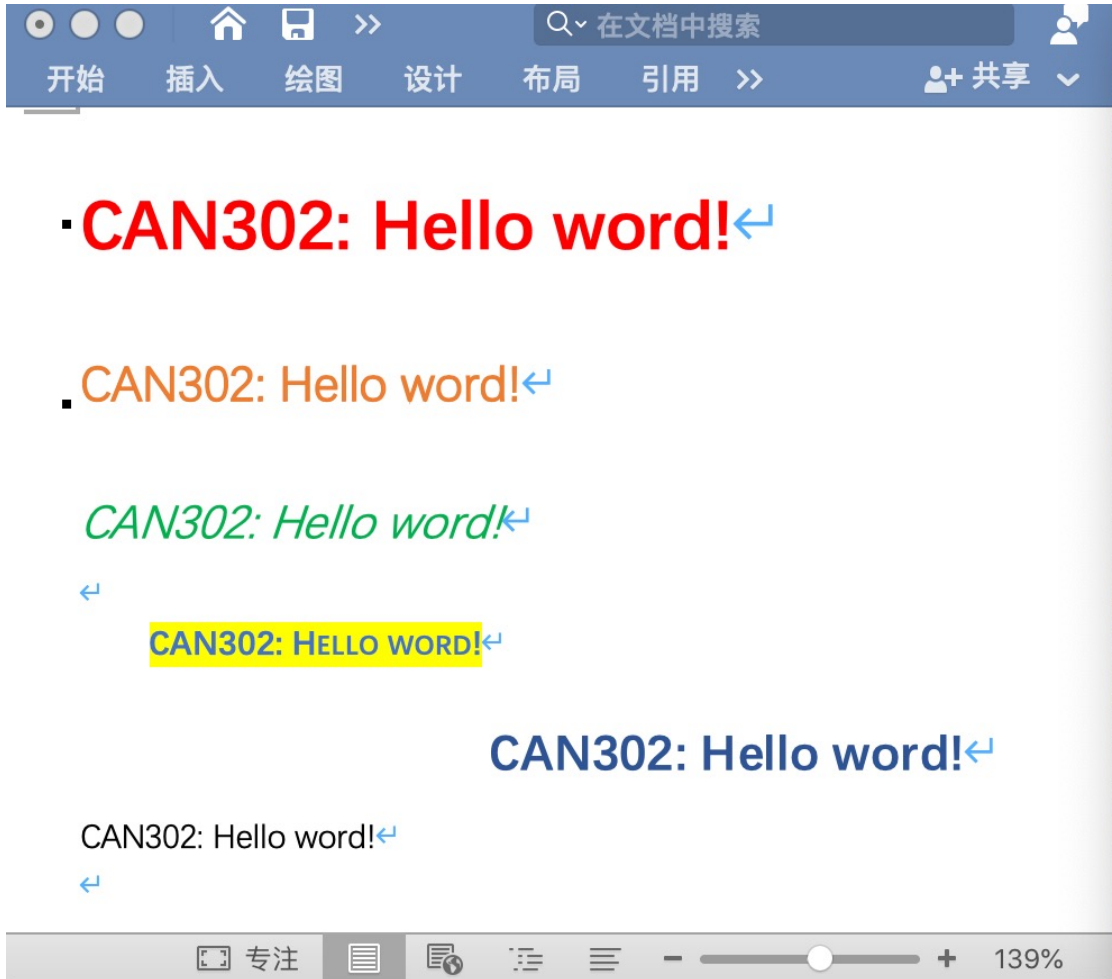

- Informational responses (100–199)
- Successful responses (200–299)
- Redirection messages (300–399)
- Client error responses (400–499)
- Server error responses (500–599)
The below status codes are defined by **section 10 of RFC 2616**. You can find an updated specification in **RFC 7231**.

https://developer.mozilla.org/en-US/docs/Web/HTTP/Status

Think about "word" and "notepad"

CAN302: Hello word!

CAN302: Hello word!

CAN302: Hello word!

Html and CSS make the webpage likes nice!!!

Html, CSS and JS

https://html-css-js.com/
https://blog.hubspot.com/marketing/web-design-html-css-javascript
https://developer.51cto.com/art/202004/614896.htm
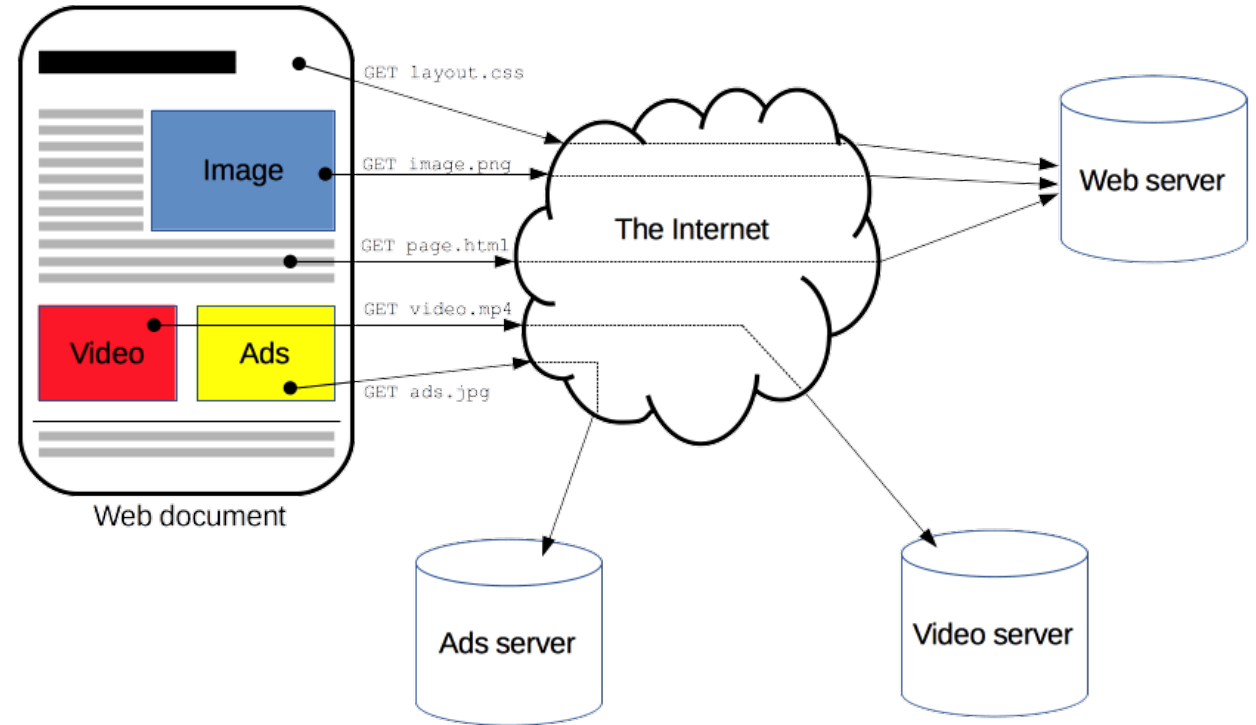

Html basics

- ## Markup language 💬

- Elements are the basic components in HTML

- Tags to mark the type of elements. Normally marks are pairs.

- Each element can set attributes. Styles define how the contents looks like. Styles can be defined directly or by a class.

- "id" is special attribute, it must be unique and can be referred as variable.

https://zhuanlan.zhihu.com/p/171538981
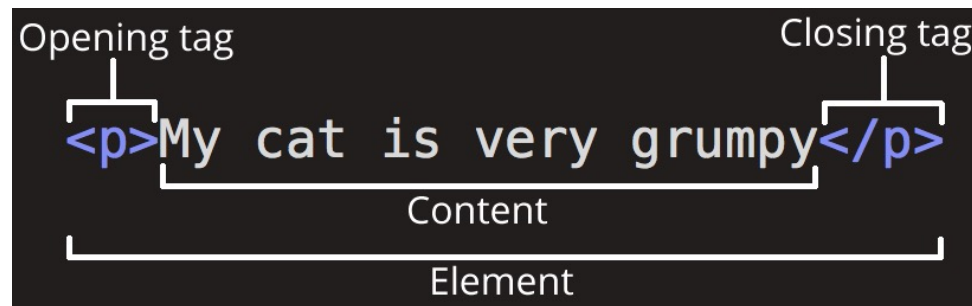

Html basics

```
<!-- 4 heading levels: -->
<h1>My main title</h1>
<h2>My top level heading</h2>
<h3>My subheading</h3>
<h4>My sub-subheading</h4>
```

```
<p>This is a single paragraph</p>
```

```
<p>At Mozilla, we're a global community of</p>

<ul>
  <li>technologists</li>
  <li>thinkers</li>
  <li>builders</li>
</ul>

<p>working together ... </p>
```

```
<a href="https://www.mozilla.org/en-US/about/manifesto/">Mozilla Man
ifesto</a>
```

HTML markup includes so many "elements" such as: <head>, <title>, <body>, <header>, <footer>, <article>, <section>, <p>, <div>, <span>, <img>, <aside>, <audio>, <canvas>, <datalist>, <details>, <embed>, <nav>, <output>, <progress>, <video>, <ul>, <ol>, <li> and many others.

https://developer.mozilla.org/en-US/docs/Learn/Getting_started_with_the_web/HTML_basics

Html - **Structuring** the Web

```html
<img src="images/firefox-icon.png" alt="My test image">
```

```html
<p>My cat is <strong>very</strong> grumpy.</p>
```

```html
<!DOCTYPE html>
<html>
  <head>
    <meta charset="utf-8">
    <title>My test page</title>
  </head>
  <body>
    <img src="images/firefox-icon.png" alt="My test image">
  </body>
</html>
```

- Some elements have no content and are called empty elements. The sample has two attributes, but there is no closing </img> tag and no inner content.

- You can put elements inside other elements too — this is called **nesting**. The whole html file is a nested by html, head and body and so on.

CSS basics

```
h1
a:link
.manythings
#onething
*
.box p
.box p:first-child
h1, h2, .intro
```

```
h1 {
  color: blue;
  background-color: yellow;
}

p {
  color: red;
}
```

- **Selector**:
  - A selector targets HTML to apply styles to content.
  - It could be HTML tag, id or a Class (start with ".") .
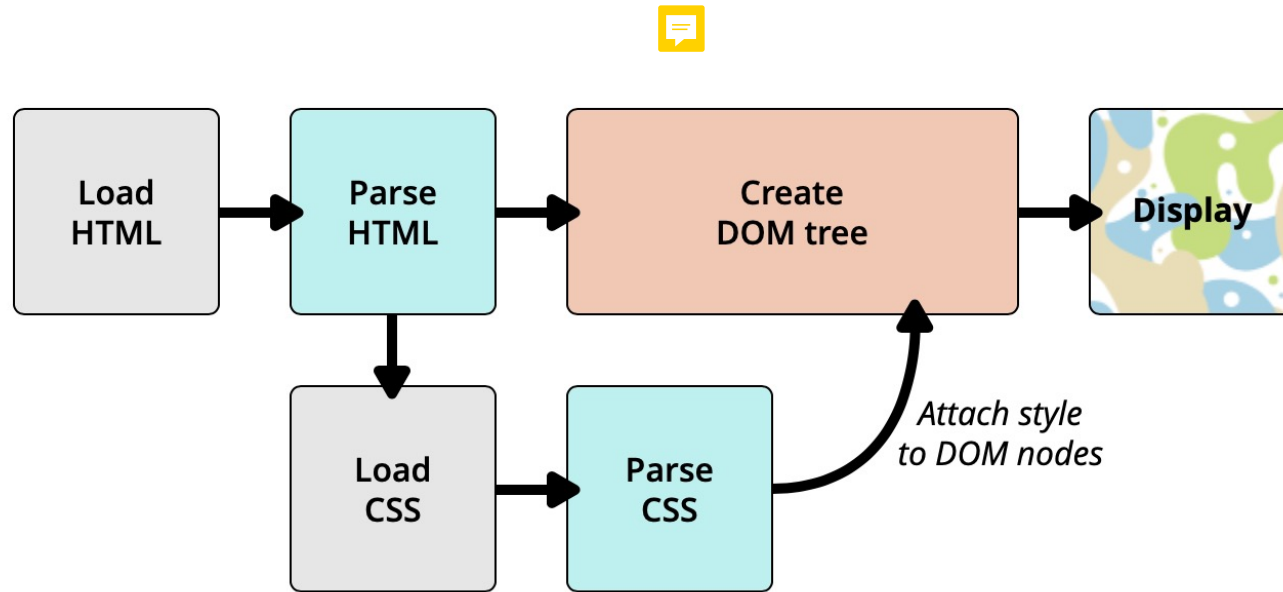

- **Property and value:**
  - **Properties**: These are human-readable identifiers that indicate which stylistic features you want to modify. For example, font-size, width, background-color.
  - **Values**: Each property is assigned a value. This value indicates how to style the property.

https://developer.mozilla.org/en-US/docs/Learn/CSS/First_steps/How_CSS_is_structured

CSS - **Styling** the Web

Load HTML → Parse HTML → Create DOM tree → Display

Parse HTML → Load CSS → Parse CSS → Attach style to DOM nodes

HTML ⟶ 超文本标记语言
       `<span>语言</span>`

CSS ⟶ 层叠样式表   span { color : blue }
                         选择器 属性 值

JS ⟶ span.style.color = 'green';
   修改页面样式

Mocha → LiveScript → JavaScript: JS

- **Browser has JS engine which marry the best of an interpreter and a compiler.**
- **JS is a script language and TypeScript is a new choice for front-end.**
- **JS make the web interactive without server included.**

Except Java in JavaScript, JS look like Java but not behave the same.

https://suleimanyunus.dev/how-javascript-works-the-javascript-engine

JS: V8 engine

1. 函数只声明未被调用，不会被解析生成ast

2. 函数只被调用一次，bytecode直接被解释执行

3. 函数被调用多次，可能会被标记为热点函数，
   可能会被编译成机器代码

https://www.jianshu.com/p/c71c714c27bd

JS APIs - Application Programming Interfaces

- **APIs** provide you with extra superpowers to use in your JavaScript code.
- **APIs** are ready-made sets of code building blocks that allow a developer to implement programs that would otherwise be hard or impossible to implement.
- They do the same thing for programming that ready-made furniture kits do for home building — it is much easier to take ready-cut panels and screw them together to make a bookshelf.
- Browser natively support APIs and there are 3rd party APIs.

3rd party APIs

your browser

Browser APIs

Core JavaScript language

https://developer.mozilla.org/en-US/docs/Learn/JavaScript/First_steps/What_is_JavaScript

Html CSS and JS together

https://developer.mozilla.org/en-US/docs/Learn/JavaScript/First_steps/What_is_JavaScript
https://hurna.io/fr/academy/glossaries/web_http.html

A sample of Html, CSS and JS

⬜ ⬜ 🖥 ▯ ▯ ▭   **Save/Share** ↗

```
1  <!DOCTYPE html>                                      HTML
2  <html>
3  <head>
4  <title>HTML CSS JS</title>
5  </head>
6  <body>
7  <h1 id="welcome">HTML CSS JS</h1>
8  <p>Welcome to HTML-CSS-JS.com</p>
9  <p>Online HTML, CSS and JavaScript editor
10 with instant preview.</p>
11 </body>
12 </html>
```
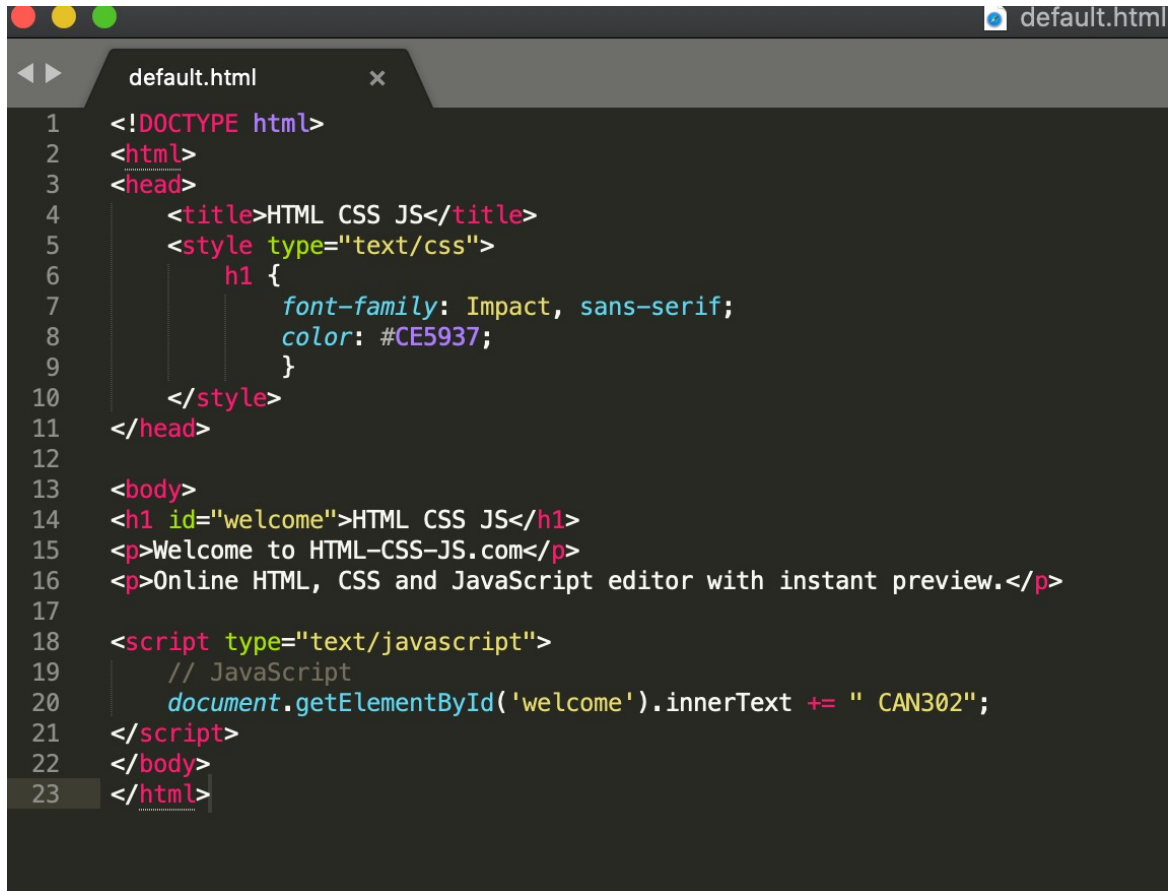

```
1  // JavaScript                                   JavaScript
2  document.getElementById('welcome').innerText +=
3  " CAN302 ";
4
```

```
1  /* CSS styles */                                      CSS
2  h1 {
3  font-family: Impact, sans-serif;
4  color: #CE5937;
5  }
6
```

HTML CSS JS CAN302

Welcome to HTML–CSS–JS.com

Online HTML, CSS and JavaScript editor with instant preview.

https://html-css-js.com/

USE IDE to edit the codes

- We can write any code in notepad but the efficiency would be very low.

- IDE (Integrated development environment) will help us to have a better development experience.

- There are many choices, such as VS code, Sublime Text, WebStorm ⋯⋯

- **Brackets 2.0.1** is the recommended one for CAN302 but you can use the one your are familiar with.

- You can download all files in LMO!!!

All in one

```html
<!DOCTYPE html>
<html>
<head>
    <title>HTML CSS JS</title>
    <style type="text/css">
        h1 {
            font-family: Impact, sans-serif;
            color: #CE5937;
            }
    </style>
</head>

<body>
<h1 id="welcome">HTML CSS JS</h1>
<p>Welcome to HTML-CSS-JS.com</p>
<p>Online HTML, CSS and JavaScript editor with instant preview.</p>

<script type="text/javascript">
    // JavaScript
    document.getElementById('welcome').innerText += " CAN302";
</script>
</body>
</html>
```
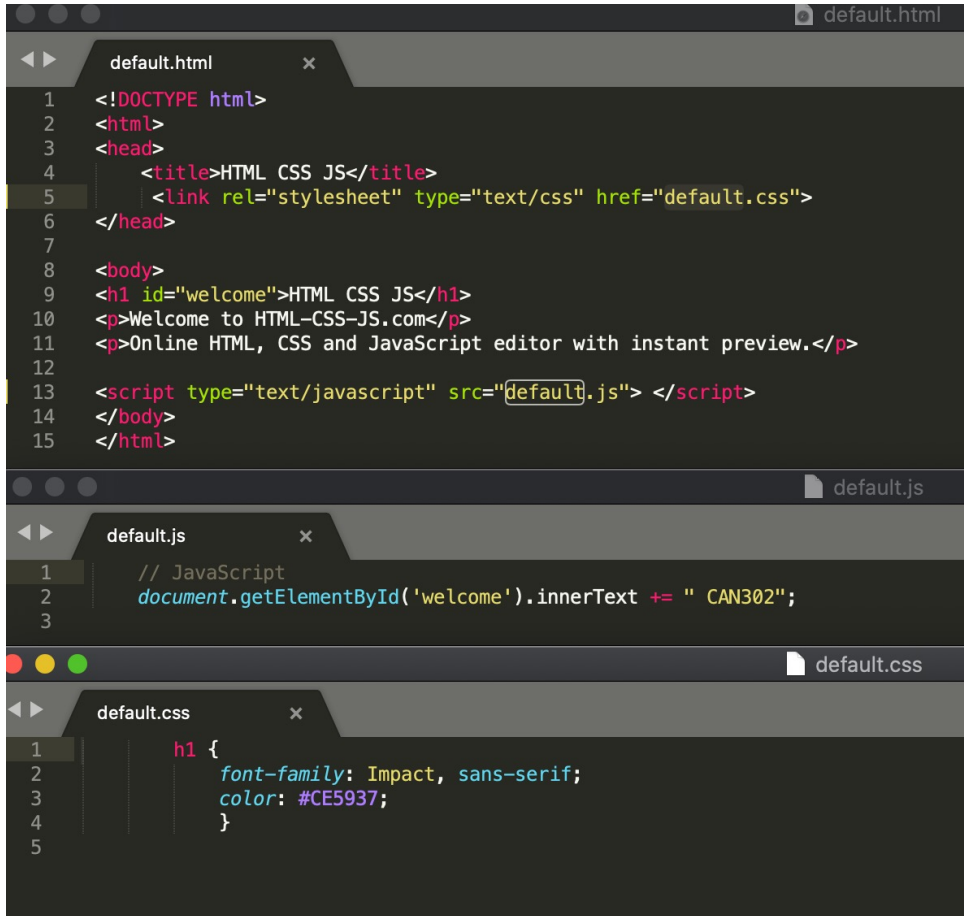

file:///Users/ping/Desktop/d

HTML CSS JS CAN302

Welcome to HTML-CSS-JS.com

Online HTML, CSS and JavaScript editor with instant preview.

Browser can directly display the local html files

https://www.cnblogs.com/hh-kk/p/7775261.html

Save html CSS and JS in different files

```
                                                    default.html
  <  >    default.html            ×
   1    <!DOCTYPE html>
   2    <html>
   3    <head>
   4        <title>HTML CSS JS</title>
   5        <link rel="stylesheet" type="text/css" href="default.css">
   6    </head>
   7
   8    <body>
   9    <h1 id="welcome">HTML CSS JS</h1>
  10    <p>Welcome to HTML-CSS-JS.com</p>
  11    <p>Online HTML, CSS and JavaScript editor with instant preview.</p>
  12
  13    <script type="text/javascript" src="default.js"> </script>
  14    </body>
  15    </html>
                                                    default.js
  <  >    default.js              ×
   1        // JavaScript
   2        document.getElementById('welcome').innerText += " CAN302";
   3
                                                    default.css
  <  >    default.css             ×
   1        h1 {
   2            font-family: Impact, sans-serif;
   3            color: #CE5937;
   4            }
   5
```

- A website always has much more than 1 page.

- CSS and JS can be shared by different web pages.

- We can put the CSS and JS in separate files.

- We can use "tags" that bring in CSS and JS files.

- Same as all programing, pls keep the GOOD CODE MANNER.

https://www.bbsmax.com/A/QW5YZ7DGdm/

WAIT: what the SERVER is doing?
Make our server ready!

XAMPP

- PHP has a relatively low barrier to study.

- XAMPP is an easy to install **Apache server** distribution containing MariaDB, PHP, and Perl. We can make our web and database server ready by simply click "next"!

- You can download all files in LMO!!!

Server: "return the html files via http"

/usr/local/apache/

- Like normal program, "Web Server" software (here is Apache) was installed on the hard disk of "server".

- In this case, "htdocs" is the default folder to store "html" files.

http://www.360doc.com/content/19/0609/23/54508727_841426861.shtml

Organize the files of our website

remy Update README.markdown		✓ 0a690a6 on 2 Oct 2019
📁 assets	adding the gum demos	
📁 css	fix: update carbon css	
📁 demos	fix: missing bin image	
📁 images	feat: tweaks	
📁 includes	fix: carbon ad	
📁 js	fix: view source	
📁 server	Remove submodule	
📁 www	+www	
📄 .gitignore	+ignore	
📄 .gitmodules	updated promo & moved to node-websocket-server	
📄 .htaccess	Fixing history support test for Firefox, since it doesn't support one…	
📄 MIT-LICENSE.TXT	License	
📄 README.markdown	Update README.markdown	

- There are many ways to organize the files of a website.
- One usual way is putting same type files in one folder, like css, js, image and www(html).

https://github.com/remy/html5demos

How to publish the web?

- **Copy** all files to the server!

List of all folders

- Severs like Apache, it can allow to show all folders.
- Normally we want to avoid it since many "hidden" info will be leakage.
- You can see in this example, all contents are organized in different folders.

Check the URL of two news

- See the URL address, it may corresponding to the folder on the server.
- For news sites, the day time is always used.
- The web content need to be updated remotely can automatically.

Use SSH to access the server remotely

- SSH is a powerful tool for most maintenance engineers.
- Remote control is always the high risk point of server.

Challenge: frequently update the products

- It is not possible to update/publish webpages so frequent.
- Think about database technology.

One more thing: Bootstrap

- Quickly design and customize responsive mobile-first sites with Bootstrap, the world's most popular front-end **open source toolkit**, featuring Sass variables and mixins, responsive grid system, extensive prebuilt components, and powerful JavaScript plugins.
- Many pre-defined classes in Bootstrap includes CSS, **fonts** ad JS (earlier version use jQuery).
- With Bootstrap, develop the front-end project can be much easier.

https://getbootstrap.com/
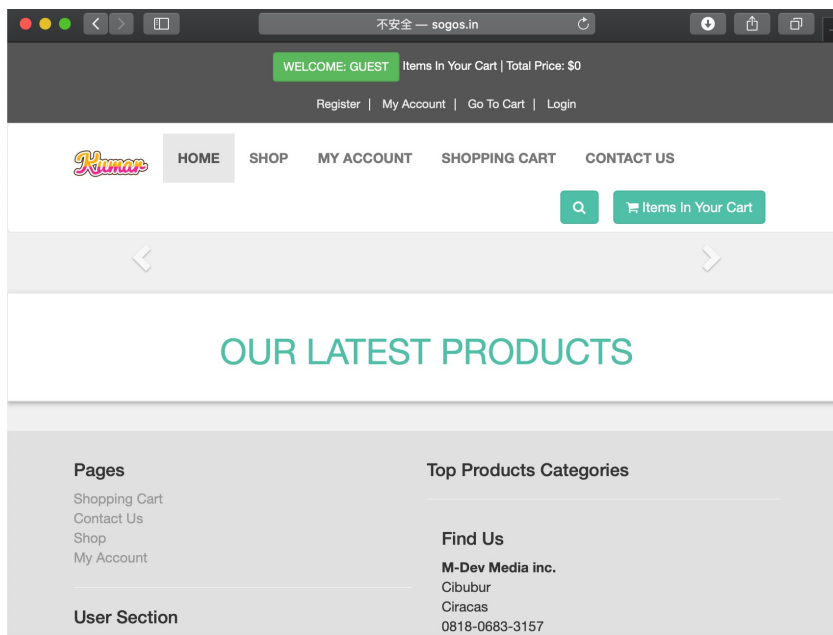

M-Dev Store

The most important thing is not how to program but how you architect the whole thing.

- For the beginner, it is better to start with the "easy" project but cover all aspects.

- M-Dev Store is an excellent tutorial to follow since it is somehow "easy" but covered the knowledges of webpage, server program and database.

- Follow it step by step, you can build an online shop by yourself.

- The starting files are in the zip pacakage.

Tutorial videos are here:
https://www.bilibili.com/video/BV1nK4y1U7Eg
